Author Index

Akiyama, M.	Development of a wear-resistant surface layer for a tool to be used for high-temperature stainless steel rolling	473–480
Amano, S.	Development of a wear-resistant surface layer for a tool to be used for high-temperature stainless steel rolling	473–480
Bassani, R.	Passive magnetic bearings: the conic-shaped bearing	151–161
Bec, S.	The École Centrale de Lyon surface force apparatus: an application overview	353–361
Beynon, J. H.	A simple method of stress intensity factor calculation for inclined fluid-filled surface-breaking cracks under contact loading	299–304
Beynon, J. H.	A simple method of stress intensity factor calculation for inclined surface-breaking cracks with crack face friction under contact loading	481–486
Bhushan, B.	Generation of magnetic tape debris and head stain in a linear tape drive	127–138
Bhushan, B.	Pole tip recession in linear tape heads: measurement technique and infuence of head materials, tape speed and tape tension	139–150
Bovington, C.	Elastohydrodynamic lubrication: a lubricant industry perspective	417–426
Bowden, P. E.	Design and selection of mechanical seals to minimize emissions	177–188
Bull, S. J.	The effect of the white layer on micro-pitting and surface contact fatigue failure of nitrided gears	305–313
Cann, P. M. E.	Thin-film grease lubrication	405–416
Dong, D.	Derivation of basic rheological parameters from experimental elastohydrodynamic lubrication traction curves of low-viscosity lubricants	53–61
Dowson, D.	Past, present and future studies in elastohydrodynamics	317–333
Duhring, B.	The application of plastics in dynamic seals	227–237
Dyson, I. N.	The effect of surface hardening on the elastic shakedown of elliptical contacts	287–298
Ehret, P.	Past, present and future studies in elastohydrodynamics	317–333
Evans, J. T.	The effect of the white layer on micro-pitting and surface contact fatigue failure of nitrided gears	305–313
Félix-Quiñonez, A.	Kinematics of two-sided surface features in elastohydrodynamic lubrication	95–108
Fillon, M.	Analysis of static and dynamic misaligned tilting-pad journal bearings	253–261
Fletcher, D. I.	A simple method of stress intensity factor calculation for inclined fluid-filled surface-breaking cracks under contact loading	299–304
Fletcher, D. I.	A simple method of stress intensity factor calculation for inclined surface-breaking cracks with crack face friction under contact loading	481–486
Georges, J.-M.	The École Centrale de Lyon surface force apparatus: an application overview	353–361
Greenwood, J. A.	Transverse roughness in elastohydrodynamic lubrication	383–396
Gustafsson, L.	Correction for pressure dependence of the refractive index in measurements of lubrication film thickness with image analysis	109–126
Ho, Y. S.	Rotor dynamic coefficients of a thrust active magnetic bearing considering runner tilt	451–462
Hofmann, D. A.	The effect of the white layer on micro-pitting and surface contact fatigue failure of nitrided gears	305–313
Hooke, C. J.	The behaviour of low-amplitude surface roughness under line contacts	275–286
Iversen, G.	The application of plastics in dynamic seals	227–237
Johnston, D. E.	Design aspects of modern rotary shaft seals	203–213
Kagaya, M.	The environmental aspects of lubricants	1–12
Kaneta, M.	Experimental study on microelastohydrodynamic lubrication	371–381
Kapoor, A.	The effect of surface hardening on the elastic shakedown of elliptical contacts	287–298
Kato, T.	Molecular layering in thin-film elastohydrodynamics	363–370
Kemble, A.	Limiting speeds and operating temperatures of fixed preload large bore angular contact ball bearings for machine tools	85–94
Kim, K.	Development of a grease lubrication system for an expendable small turbomachine	47–51
Kovacevic, R.	An energy balance of high-speed abrasive water jet erosion	463–472
Kubo, K.	The environmental aspects of lubricants	1–12
Lacey, S. J.	Limiting speeds and operating temperatures of fixed preload large bore angular contact ball bearings for machine tools	85–94
Liu, H.	Rotor dynamic coefficients of a thrust active magnetic bearing considering runner tilt	451–462
Lubeck, A. O.	Mixed lubrication in mechanical face seals with plain faces	163–175
Lubrecht, A. A.	The École Centrale de Lyon surface force apparatus: an application overview	353–361
Lubrecht, A. A.	Elastohydrodynamic lubrication of rough surfaces	397–404
Ma, M.-T.	A comparative thermal analysis of the static performance of different fixed profile bore plain bearings	13–30
